

CPD Seminar: Sustainability from Natural Daylight in the Built Environment

This CPD promotes the sustainability benefits achieved using natural daylight as the primary source of illumination and explores the options available in materials choice to ensure a low embodied carbon solution for GRP rooflights in the industrial sector.

Presented under the follow headings:

- Sustainability - Positive contribution from GRP rooflights
- Embodied Carbon - A changing environment
- Health and Wellbeing - Benefits delivered from natural daylight in our buildings
- Types of Daylighting - non-diffused and naturally diffused
- Materials Choice - Performance criteria and low-embodied carbon options
- Photovoltaic Panels - Considerations
- Specification - A new system approach
